Bug Comments

Opened by Richard Johnston (rcjohnst@us.ibm.com)on 2004-11-12 17:26 EST[reply]

```
Description of problem:
Fedora 3 does not this XOrg bugfix
https://freedesktop.org/bugzilla/show_bug.cgi?id=1560

This bugfix contains monospaced fonts required to run ibm5250.
The application is included in the iSeriesAccess rpm.
The fonts were previously included in Fedora 1 and 2.

Version-Release number of selected component (if applicable):

How reproducible:

every time

Steps to Reproduce:
1. Start X (Ex startx from a non graphical login)
2. In a terminal window type
      xlsfonts | grep lucidatype | grep 8859-1

Actual results:
The command above returns nothing or a blank line

Expected results:
Several lines containing lucidatypewriter and ending in 8859-XX
Similar to
-b&h-lucidatypewriter-bold-r-normal-sans-10-100-75-75-m-60-iso8859-1
-b&h-lucidatypewriter-bold-r-normal-sans-10-100-75-75-m-60-iso8859-10
-b&h-lucidatypewriter-bold-r-normal-sans-10-100-75-75-m-60-iso8859-13
-b&h-lucidatypewriter-bold-r-normal-sans-10-100-75-75-m-60-iso8859-14
```

```

-b&h-lucidatypewriter-medium-r-normal-sans-8-80-75-75-m-50-iso8859-15

Additional info:

Currently only iso10646-1 font encodings are included.
```

Comment #1 From Richard Johnston (rcjohnst@us.ibm.com) on 2004-11-15 13:19 EST[reply]

```
Workaround until FC3 includes xorg bug 1560
Using existing RPM's as suggested by TJ on iSeries Access forum

        Extract fonts from 100 and 75 dpi rpm's, for example
        Free86-75dpi-fonts-4.3-30mdk.i586.rpm and
        Free86-100dpi-fonts-4.3-30mdk.i586.rpm
        Extract lut*ISO*pcf.gz files to /usr/X11R6/lib/X11/fonts/local
        run fc-cache on /usr/X11R6/lib/X11/fonts/local
        run mkfontdir on /usr/X11R6/lib/X11/fonts/local
        (then you should see fonts.cache-1 file and fonts.dir).
        Add /usr/X11R6/lib/X11/fonts/local to xorg.conf (or xft server)
        Restart the x server.

Or compile fonts from xorg cvs source

http://www.freedesktop.org/XOrg/CvsPage

To build and create a tar for the missing files
1. Create a working directory (Ex  $ mkdir xsrc)
2. $ cd xsrc
3. download CVS src

        $ cvs -d :pserver:anoncvs@cvs.freedesktop.org:/cvs/xorg login
        CVS password: <hit return>
        $ cvs -d :pserver:anoncvs@cvs.freedesktop.org:/cvs/xorg co -P xc

4. $ cd xsrc/xc/fonts
5. $ xmkmf
```

```
6. $ make Makefiles
7. $ cd bdf/100dpi
8. $ make
9. $ cd ../75dpi
10 $ make
11 $ cd ..
12 $ tar cvfz lucidatype.fonts.tgz *dpi/lut*pcf.gz

To install

1. After copying file to Fedora 3 system su to root and untar file
        $ su -l
        give ROOTS password
        $ cd /usr/X11R6/lib/X11/fonts
        $ tar xvfz <path to tar>/lucidatype.fonts.tgz
2. Still as root cd to 75 and 100 dpi directories and redo mkfontdir
        $ cd /usr/X11R6/lib/X11/fonts/75dpi
        $ mkfontdir
        $ cd /usr/X11R6/lib/X11/fonts/100dpi
        $ mkfontdir
3. Restart X
lib/X11/fonts/100dpi
        $ mkfontdir
3. Restart X
```

Comment #2 From Wolfgang Pauer (wolfgang_pauer@at.ibm.com) on 2004-11-18 11:08 EST[reply]

```
When will this bug be fixed ?
Our clients running FC3 are all experiencing this problem.
```

Comment #3 From Mike A. Harris (mharris@mharris.ca) on 2004-11-18 15:00 EST[reply]

```
Fedora Core is intended for hobbiest/enthusiast usage, and we
provide updates to Fedora Core only for security issues and
in some cases we may provide updates as time permits for other
bug related issues.  All bug fixes and development occurs in
rawhide over time, and will be present in the next Fedora Core
OS release (FC4).

Red Hat Enterprise Linux WS 3 is recommended and supported
OS product for corporate desktop/client deployments.

Once we have investigated this issue, we will provide comments
here to update the status, however we generally do not provide
timelines for fixes for Fedora Core.

Currently freedesktop.org is unavailable due to a security
breach.
```

Comment #4 From Mike A. Harris (mharris@mharris.ca) on 2004-11-19 17:46 EST[reply]

*** Bug 139121 has been marked as a duplicate of this bug. ***

Comment #5 From Mike A. Harris (mharris@mharris.ca) on 2004-11-23 17:01 EST[reply]

Freedesktop.org is alive again, and I've reviewed the upstream
bug report, and integrated the patch into rawhide for future
builds. This fix will also be present in the next Fedora
Core 3 erratum release, which should be soon. It will also
be present in our RHEL 4 builds within a few days.

Thanks.

Setting status to "RAWHIDE"

Comment #6 From Joe Pruett (joey@q7.com) on 2005-02-22 19:29 EST[reply]

this bug also seems to impact rhel4. the lucidatypewriter iso8859-1
fonts aren't available there either. not only do i like that font,
but it keeps some applications from running.

Comment #7 From Joe Pruett (joey@q7.com) on 2005-03-01 16:40 EST[reply]

aha! the fonts-xorg package wasn't rebuilt after the xorg-x11 package was
patched and rebuilt. i just checked the build dates of the .src.rpms and get:

```
Name         : xorg-x11                 Relocations: (not relocatable)
Version      : 6.8.1                          Vendor: Red Hat, Inc.
Release      : 23.EL                      Build Date: Thu Dec  9 13:10:08 2004
Install Date: (not installed)            Build Host: dolly.build.redhat.com

Name         : fonts-xorg               Relocations: (not relocatable)
Version      : 6.8.1                          Vendor: Red Hat, Inc.
Release      : 1                          Build Date: Tue Oct 19 12:23:04 2004
Install Date: (not installed)            Build Host: thor.perf.redhat.com
```

i am trying to rebuild the font rpm, but it is somewhat magic so i hope that
redhat gets this fixed soon...

Comment #8 From Mike A. Harris (mharris@mharris.ca) on 2005-03-02 03:12 EST[reply]

The fonts-xorg package was updated with the new fonts in CVS for sure,
and I was fairly sure it made it into rawhide also, but I will have to
doublecheck now, as it went missing from RHEL4 also.

Reopening for now, until I confirm and/or fix. Thanks for the tip off.

Comment #9 From Mike A. Harris (mharris@mharris.ca) on 2005-03-02 09:41 EST[reply]

It is fixed in rawhide already, and will be in the RHEL4 erratum too.
Only FC3 doesn't have it now. I suppose we can release an update for
FC3 sometime in the next few weeks too.

```
I'll leave this open until then.

Thanks again.
```

Comment #10 From Joe Pruett (joey@q7.com) on 2005-03-02 10:10 EST[reply]

```
will this be pushed out for rhel4 right away?  or will it wait for u1?
```

Comment #11 From Mike A. Harris (mharris@mharris.ca) on 2005-05-16 12:55 EST[reply]

```
(In reply to comment #10)
> will this be pushed out for rhel4 right away?  or will it wait for u1?

It's in RHEL4 U1.  In general, non-critical issues of this nature
are fixed in RHEL releases in synchronous quarterly updates, and
only critical security issues and other major critical issues get
asynchronous errata out of band.

HTH
```

Comment #12 From Mike A. Harris (mharris@mharris.ca) on 2005-05-16 12:59 EST[reply]

```
Fixed in fonts-xorg-6.8.2-0.FC3.1 for FC3, which is built and will
be made available as an FC3 update hopefully sometime today.
```

Comment #13 From Mike A. Harris (mharris@mharris.ca) on 2005-05-17 17:18 EST[reply]

```
It's released now.
```
